Claims 1-62 (Canceled)

63.   (New) A method comprising:

receiving a communication from a sender, the communication including an audio message and sender identification information;

creating a communication that is capable of being sent via the Internet, the created communication including the audio message and sender identification information; and

sending the created communication to a local presentation interface and optionally to a remote client.

64.   (New) The method of claim 63 further including searching a remote website for information correlated with the sender identification information.

65.   (New) The method of claim 64 further including storing the sender identification information and the correlated information received from a remote website.

66.   (New) The method of claim 65 wherein creating a communication that is capable of being sent via the Internet includes creating the communication using the stored information.

67.   (New) The method of claim 63 wherein creating a communication that is capable of being sent via the Internet includes creating an email, the email to include the audio message as an attachment.

68.   (New) The method of claim 63 wherein creating a communication that is capable of being sent via the Internet includes creating a hypertext markup language page, the hypertext markup language page including a hyperlink to the audio message.

69.   (New) The method of claim 68 including receiving a request for the audio message, the audio message to be forwarded as an MP3 file.

70.   (New) The method of claim 63 further including displaying the created communication.

71.   (New) An apparatus comprising:

a telephone mechanism to connect to a network and to receive a communication from a sender, the communication including an audio message and sender identification information;

a composer to compose a communication capable of being sent via the Internet, the composed communication to include the audio message and sender identification information; and

a presentation interface to display the composed communication.

72.   (New) An apparatus as defined in claim 71 further comprising:

a client to optionally transmit the composed communication to a remote client.

73.   (New) An apparatus as defined in claim 71 further comprising:

a search director to search a remote website using the sender identification information, for correlated information related to the sender.

74.   (New) An apparatus as defined in claim 73 further comprising:

a memory to store the audio message, the sender identification information and the correlated information.

75.   (New) An article storing instructions that, if executed, enable a system to:

receive a communication from a sender, the communication to include an audio message and sender identification information;

create a communication that is capable of being sent via the Internet, the created communication to include the audio message and the sender identification information; and

send the created communication to a local presentation interface and optionally to a remote client.

76.   (New) The article of claim 75 storing instructions, that if executed, enable the system to search a remote website for information correlated with the sender identification information.

3

77. (New) The article of claim 76 storing instructions, that if executed, enable the system to store the sender identification information and the correlated information received from a remote website.

78. (New) The article of claim 77 storing instructions, that if executed, enable the system to create a communication using the stored information.

79. (New) The article of claim 75 storing instructions, that if executed, enable the system to create an email, the email to include the audio message as an attachment.

80. (New) The article of claim 75 storing instructions, that if executed, enable the system to create a hypertext markup language page, the hypertext markup language page including a hyperlink to the audio message.

81. (New) The article of claim 80 storing instructions, that if executed, enable the system to receive a request for the audio message, the audio message to be forwarded as an MP3 file.

82. (New) The article of claim 75 storing instructions, that if executed, enable the system to display the created communication.
